DETAILED ACTION

Election/Restrictions

- 1. Applicant's election without traverse of Group II, claims 8-14, in the reply filed on November 14, 2006 is acknowledged.
- 2. The non-elected claims have been canceled.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 5. Claims 8-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art (figure 2 and paragraphs 4-6 of the instant specification) taken together with Moslo (2,976,571: figures 1-6; column 1, lines 18-39; column 2, line 58 to column 3, line 31; and column 3, line 75 to column 4, line 22).

Application/Control Number: 10/709,708

Art Unit: 1722

The admitted prior art discloses a two-part microstructure mold (11) having a lower mold (111) and an upper mold (112) having upper and lower cores supported within the mold to form a cavity (113). The mold has an injection opening (114). The admitted prior art does not disclose an extraction opening or a sealing means.

Moslo discloses an injection mold having a lower mold (15) and an upper mold (16) defining a cavity (18), an extraction opening (22) immediately adjacent the mold cavity (18), an extraction passageway (23, 21) connected to a vacuum source for removing volatiles from the molding cavity to prevent porosity and voids in injection molded articles, and o-ring seals (41) to seal the mold cavity to allow the vacuum to effectively remove the volatiles from the mold cavity.

It would have been obvious at the time of the invention to one of ordinary skill in the art to modify the microstructure mold as disclosed by the admitted prior art by using an extraction opening and pathway and o-ring seals as disclosed by Moslo for the purpose of removing volatiles from the mold cavity before molding to reduce molding defects of porous molded articles and pock-marks in the surface of the molded article.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The remaining references illustrate the state of the art of injection molds having venting mechanisms.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert B. Davis whose telephone number is 571-272-1129. The examiner can normally be reached on Monday-Friday 9-5:30.
